Education

Degree/Certificate	Institute	Year
B.Tech(CSE)	Indian Institute of Information Technology, Kota	2023 – 2027

Experience

Open Source Contributor | GirlScript Summer of Code

May 2024 - Aug 2024

- Implemented global state management using React Context API for the Moksh repository, ensuring seamless data persistence for core features across application routes.
- Developed responsive UI solutions and resolved complex component lifecycle bugs across multiple open-source repositories utilizing React.js and custom hooks.
- Ranked in the top 11% (Top 160 of 1,500+ contributors) by consistently collaborating with maintainers via Git to review, optimize, and merge production-ready code.

Projects

1. SketchRoom : Real-Time Collaborative Whiteboard

[Live Link](#)

Tech Stack: Spring Boot, React, WebSocket (STOMP), Redis, PostgreSQL, TypeScript, Docker

- Engineered a collaborative whiteboard with Spring Boot WebSocket (STOMP) enabling live multi-user drawing sync across shared rooms with sub-100ms latency.
- Implemented Redis write-behind caching to buffer high-frequency draw events and batch-flush to PostgreSQL every 30s, reducing DB writes by ~98%.

2. InTune : AI Roommate Matching Platform

[Live Link](#)

Tech Stack: React, TypeScript, Spring Boot, Java, FastAPI, Python, Sentence-Transformers, MongoDB, Tailwind CSS, Tesseract.js, Web Speech API (OmniDim)

- Reimagined roommate-finding around lifestyle compatibility using OmniDim voice/text descriptions, semantically compared via a Sentence-Embedding model (SBERT) to surface genuinely compatible matches.
- Protected user privacy during discovery with auto-generated anonymous aliases, revealing real identities only after a mutual match.
- Ensured data security with entirely on-device identity verification, OCR'ing and checksum-validating Aadhaar photos in the browser so sensitive documents never leave the user's machine.

3. Saarthi : AI-Powered Women's Health & Telehealth Platform

[Live Link](#)

Tech Stack: Spring Boot, React, PostgreSQL, Redis, JWT, WebRTC, Stripe, Gemini API, Resilience4j

- Built a responsive full-stack web app with JWT-secured REST APIs and a PostgreSQL database to manage patient profiles, cycle tracking, vitals history, and persistent appointment records.
- Enabled browser-based 2-way video calls using a WebSocket signaling server for low-latency doctor-patient consultations, alongside geolocation-based specialist search using Haversine distance scoring.
- Integrated Gemini AI for symptom screening utilizing a Resilience4j circuit breaker for fault-tolerant API failover, and automated secure appointment bookings via Stripe and UPI.

Technical Skills

Languages: Java, JavaScript, TypeScript, Python, C

Frontend Technologies: React, Tailwind CSS, HTML5, CSS3

Backend Technologies: Spring Boot, REST APIs, WebSocket

Databases & Caching: MongoDB, PostgreSQL, Redis, MySQL

Tools & Platforms: Docker, Vercel, Render, Git

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming (OOP), DBMS, Operating Systems, Computer Networks

Hackathons & Achievements

- SheBuilds Hackathon 2025:** National Finalist (Top 1%, 1,500+ entries). Built InTune, an AI-powered roommate matching platform with OCR-based identity verification and compatibility scoring.
- HackOrbit Hackathon 2025:** Open Innovation Track Winner (1st Place) & Top 10 Finalist of 1,000+ teams. Built Saarthi, an AI-powered women's health platform with Gemini integration.
- Google Girl Hackathon 2025:** Stage 2 Selection (Top 300, 5,000+ participants) Selected in the Software Engineering Track for an AI-integrated full-stack solution Ideathon.
- Competitive Programming:** Solved 400+ problems across LeetCode, GeeksforGeeks, and CodeChef (3 ★); consistently practicing Data Structures and Algorithms.
